

Why WhatsUp Gold

WHATSUP GOLD

WhatsUp® Gold provides complete visibility of everything that's connected to your network. The unique interactive map lets you see network devices, servers, virtual machines, cloud and wireless environments in context so you can diagnose issues with pinpoint accuracy.

- Monitor Devices such as servers, routers, storage, wireless, virtual, cloud devices and more.
- Monitor Applications, alert and report on performance, response times and an array of other metrics.
- Analyse Network Traffic and identify bandwidth hogs and suspicious connections.
- Manage Configurations and automate configuration backups and restores to reduce errors and support compliance requirements.

The logo for INCRAM MICRO, with "INCRAM" in a large, bold, blue sans-serif font and "MICRO" in a smaller, blue sans-serif font to its right, with a registered trademark symbol (®) above it.

WHAT CAN WHATSUP GOLD DO FOR YOUR BUSINESS

WhatsUp Gold allows you to:

- Discover and map your entire network and automatically see network resources, connectivity, and dependencies.
- Empower your team with custom dashboards and take action quickly.
- Stay ahead of network performance with customisable alerts to learn about problems before service tickets come in.

With WhatsUp Gold, business owners have an instant view of their environments. Whether that's in the cloud or on-premise, they have clear visibility to keep track of the status of network devices, systems, and applications at-a-glance.

WhatsUp Gold gives you smarter alerts with topology-aware monitoring that understands network dependencies. So, by using the software you receive important alerts, rather than meaningless alert storms.

You can also improve your own communications and send your team alerts through SMS, email, web or Slack so they know about issues before users report them.

Implementing WhatsUp Gold with Ingram gives you a host of benefits for your business
